50 Best Camera & Angle Prompts

Powerful camera angles and framing techniques for better AI images

A free resource from **PrismPrompt**

How to use

Add any of these angle descriptions to your prompt. Camera angle strongly affects how powerful, elegant, or commercial an image feels. Combine with lighting for the best results.

Eye-Level & Standard

Eye-level shot	Natural perspective, most common and relatable angle
Straight-on front view	Direct, clean, product-facing camera
Slightly elevated eye-level	Subtle authority while staying natural
Chest-level camera	Slightly lower than eye-level, more engaging

High & Overhead Angles

High angle looking down	Subject appears smaller, softer, more vulnerable
Top-down 90 degree shot	Flat lay style, perfect for products and arrangements
Bird's eye view	Higher overhead perspective, contextual overview
Drone-style aerial view	High altitude looking down, expansive feel
45-degree high angle	Classic commercial product angle from above

Low Angles

Low angle looking up	Makes subject feel powerful, large, heroic
Ground-level shot	Camera almost on the floor, dramatic perspective
Worm's eye view	Extreme low angle looking straight up
Slightly low angle	Subtle power without extreme distortion

Side & Profile

Side profile view	Clean silhouette and shape emphasis
Three-quarter view	Most flattering and dimensional product angle
Over-the-shoulder angle	Cinematic, storytelling perspective
Dutch angle / tilted frame	Creates tension, energy, or unease

Close-ups & Detail

Close-up shot	Fills frame with subject, intimate detail
Extreme close-up / macro	Texture, material, and fine detail focus
Detail crop	Selective focus on one important part
Insert shot	Small meaningful detail that supports the story

Wide & Environmental

Wide angle shot	Shows subject in larger environment

Establishing shot	Sets the scene and location context
Full body / full product view	Complete subject visible with space around
Medium shot	Balanced framing from mid-distance

Creative & Dynamic

Tracking-style perspective	Suggests movement alongside the subject
Point-of-view (POV)	Camera sees from the subject's eyes
Reflection shot	Subject seen through mirror or reflective surface
Through-object framing	Shot through a window, door, or foreground element
Symmetrical centered shot	Perfect balance and formal composition
Rule of thirds composition	Subject placed on intersecting thirds
Negative space heavy framing	Lots of empty space for minimal look
Dynamic diagonal composition	Strong diagonal lines for energy
Layered depth shot	Foreground, midground, background separation
Shallow depth of field close-up	Subject sharp, background creamy bokeh
Deep focus wide shot	Everything from near to far is sharp
Split diopter style	Both near and far subjects in focus (creative)
Canted dramatic low angle	Low + tilted for maximum impact
Intimate over-shoulder close-up	Emotional and cinematic framing
Clean isolation shot	Subject alone with minimal background
